Abstracts

Corn is traditionally a staple food source in many parts of the world. Currently, its range of applications has also extended to feed and biofuel. Corn products extracted by the dry-milling process are used in a wide range of applications. The dry-milling process can be used as a dry grind process for either ethanol extraction from starch or fractioning of grits, meal, flour, and other co-products. The dry milling market for corn is significantly impacted by the increasing usage of ethanol as biofuel.
