## Abstracts

The global Dry-Mixed Mortar Logistics Equipment market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The rapid development of dry-mixed mortar in European and American countries is due to the following reasons: first, the increasing labor costs; second, quality requirements. In order to compete in a saturated market, it must meet the requirements of high-quality construction; third, mechanization. The construction and use of pre-mixed mortar can improve construction efficiency and reduce the proficiency requirements of workers; fourth, it can save material costs and material use; fifth, it can meet the mortar requirements of some new wall and building materials. Construction materials like styrofoam boards, air-entrained concrete and similar require special mortar products. In addition, environmental issues are getting more and more attention, and there are strict restrictions on radiation and odor in building materials in some European countries. Asia has become an emerging market for the development of dry-mixed mortar. In Southeast Asia and East Asia, the development of dry-mixed mortar products is concentrated in large cities. In these cities, the economy is growing rapidly, the population is increasing rapidly, and the requirements for environmental protection are getting higher and higher. Mortar products changed from on-site mixing to dry-mixed mortar. Due to the cascading effects of dry-mix mortar, the demand for dry-mix mortar transportation equipment will also increase.

Dry-mix logistics equipment mainly includes equipment such as mobile silos, tank trucks, and dry-mix mortar transport trucks. It is mainly used to transport the dry-mix mortar transport trucks produced by the mortar factory to the construction site, add water, and stir into wet mortar for construction; it is a dry-mix. One of the main

equipment of the industry.
