According to our (Global Info Research) latest study, the global Dry Offset Printing Presses market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A dry offset printing press is a type of printing machine that uses a combination of offset and flexographic printing principles. Unlike traditional offset printing, which requires a dampening unit to maintain a water-based balance on the plate, dry offset presses utilize a silicone blanket that acts as both a transfer and pressure medium. This eliminates the need for water-based dampening, reducing waste and environmental impact.
