## Abstracts

The global Dry or Tired Eye Drops market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Dry or tired eye drops are over-the-counter (OTC) or prescription solutions used to relieve the discomfort associated with dry eyes. Dry eyes occur when the eyes do not produce enough tears or when the tears evaporate too quickly, resulting in symptoms such as itchiness, redness, irritation, burning, or a gritty feeling in the eyes.

The primary function of these drops is to provide lubrication and moisture to the eyes, supplementing the natural tear film and alleviating dryness. Dry eye drops typically contain a combination of water, salts, and other components that mimic the composition of natural tears. Some may also contain electrolytes, hyaluronic acid, glycerin, or oils to enhance lubrication. These drops help reduce irritation, redness, and discomfort associated with dry eyes caused by factors like environmental conditions, prolonged screen use, contact lens wear, certain medications, or aging. There are various types of dry eye drops available, including preservative-free options for those with sensitive eyes and those needing to use drops frequently.
