According to our (Global Info Research) latest study, the global Dry Oxygen Generator market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The main consumer market of Dry Oxygen Generator is North America and Asia Pacific region. With the gradual recovery of the global economy after the COVID-19 outbreak and the return of major economies to normal, the industrial and medical industries will see certain growth. Demand for dried oxygen may increase in industrial manufacturing, medical facilities and laboratories. As a result, the demand for Dry Oxygen Generator will increase in the foreseeable future.

The Dry Oxygen Generator is a device that produces high-purity oxygen gas from ambient air using a process called pressure swing adsorption (PSA). In this process, ambient air is compressed and passed through a bed of zeolite or other molecular sieve material that selectively adsorbs nitrogen and other trace gases while allowing oxygen to pass through. The resulting oxygen is then collected and used for a variety of applications, including medical oxygen, industrial processes, and aerospace applications. The term 'dry' refers to the fact that the oxygen produced by these generators does not contain any moisture, which can be important in some applications where water vapor could cause problems.
