Abstracts

The global Dry Powder Culture Medium market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Biopharmaceutical companies have varying requirements for the dosage of culture media at different stages, and more and more pharmaceutical companies are currently seeking customized culture media. Therefore, good culture media manufacturers will have small-scale trial production of dry powder culture media for sample production problem elimination and large-scale trial production.

The composition of cell culture medium is complex. From the perspective of basic composition, a typical cell culture medium includes supplementing amino acids, vitamins, inorganic salts, glucose, and serum. Different formulas will directly affect the physicochemical properties of cells. There are two main packaging and sales methods: dry powder culture medium and liquid culture medium. This report focus on Dry Powder Culture Medium market.
