## Abstracts

According to our (Global Info Research) latest study, the global Dry Racing Tyres market size was valued at US\$ 62.45 million in 2025 and is forecast to a readjusted size of US\$ 105 million by 2032 with a CAGR of 6.1% during review period.

In 2025, global Dry Racing Tyres approximately 257,164 units, with an average global market price of around US\$ 236 per unit. Gross margin is about 43%. The cost is 135 usd. Production Capacity is about 300,000 units. Dry Racing Tyres are high-performance competition tyres engineered specifically for dry track conditions, typically featuring slick or near-slick tread designs and specialized rubber compounds to maximize grip, cornering force, and braking performance. Upstream, their development relies on advanced rubber chemistry, reinforcement fabrics, bead wires, carcass design, and precision tyre manufacturing and testing technologies. Downstream, dry racing tyres are exclusively used in professional and amateur motorsport, including circuit racing, single-seater series, GT and touring car championships, where consistent dry-surface traction, thermal stability, and lap-time performance are critical to competitive success.

### Wider Operating Temperature Window

Future dry racing tyres will be engineered to deliver consistent grip across a broader temperature range, reducing sensitivity to track conditions and setup changes during races.

### Advanced High-Grip Compounds

Continued innovation in rubber chemistry will focus on maximizing dry-surface adhesion while improving stability and consistency over long stints.

#### Improved Thermal and Wear Management

Tyre structures and compounds will be optimized to better control heat buildup and wear, maintaining performance during extended racing and high-load conditions.

#### Vehicle- and Track-Specific Optimization

Data-driven design and simulation tools will enable tyres to be precisely tuned for specific vehicles, tracks, and racing formats, improving overall competitiveness.

#### Lightweight and Structural Efficiency

Ongoing efforts to reduce tyre mass and improve carcass efficiency will enhance responsiveness and handling without compromising strength or safety.
