Dry steam belt cleaner is a device used to clean belt conveyors. It uses the physical properties of high-temperature dry steam to clean the belt surface. When dry steam is sprayed onto the belt surface, the high temperature and pressure of the steam can quickly soften and remove dirt, dust, oil and other impurities on the belt surface. At the same time, the impact force of the steam can peel off the impurities from the belt surface and be taken away with the flow of steam.
