Abstracts

The global Dry Storage Drum market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Dry storage barrels are a way to store highly radioactive nuclear waste, such as spent fuel that has been cooled for at least a year. So-called 'storage drums' are generally steel containers, either welded or fastened with bolts. The spent fuel rods inside the barrel are in a chemically inert gas. No leakage is a basic requirement for storage tanks. There are also steel parts, concrete or other materials on the outside of the storage tanks to shield the radiation from the nuclear waste. Therefore, this design can be used for both storage and transportation.

This report studies the global Dry Storage Drum production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Dry Storage Drum, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
