According to our (Global Info Research) latest study, the global Dry Sump Lubrication System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Dry sump lubrication system is a type of system used in high-performance engines, especially in racing cars and aircraft engines, to lubricate the engine's moving parts using oil. In this system, the oil is stored in a separate reservoir (often called an oil tank) rather than the traditional oil pan under the engine. Dry sump systems are commonly used in high-performance racing engines, where high speeds and extreme driving conditions can create unique lubrication challenges.
