## Abstracts

The global Dry Sump Lubrication System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Dry sump lubrication system is a type of system used in high-performance engines, especially in racing cars and aircraft engines, to lubricate the engine's moving parts using oil. In this system, the oil is stored in a separate reservoir (often called an oil tank) rather than the traditional oil pan under the engine. Dry sump systems are commonly used in high-performance racing engines, where high speeds and extreme driving conditions can create unique lubrication challenges.

This report studies the global Dry Sump Lubrication System production, demand, key manufacturers, and key regions.
