According to our (Global Info Research) latest study, the global Dry-Type Transformer On-Load Tap-Changer market size was valued at US\$ 361 million in 2025 and is forecast to a readjusted size of US\$ 446 million by 2032 with a CAGR of 3.1% during review period.

In 2025, the global production of dry-type transformer on-load tap-changers reached 165,300 units, with an average selling price of \$2,125 per unit. The global annual production capacity for dry-type transformer on-load tap-changers was approximately 250,000 units, with a gross profit margin of about 25.3%. A dry-type transformer on-load tap-changer is a tap-changing device used in transformers to alter the effective number of turns in the transformer winding without interrupting transformer operation, thereby adjusting the transformer's output voltage or tap range to maintain a stable supply voltage. The upstream of dry-type transformer on-load tap-changers includes metal materials, insulating materials, and transmission mechanisms, while the downstream includes industries such as electrical, photovoltaic, and HVDC.

The current market for dry-type transformer on-load tap-changers is steadily developing in response to the increasing demands of power systems for supply quality and stability. These devices play a critical regulating role in distribution networks, renewable energy generation, and high-voltage direct current (HVDC) transmission, with technological focus gradually shifting toward high reliability, maintenance-free operation, and intelligent control. At the same time, the diversification of downstream applications, particularly the rapid growth of the photovoltaic and HVDC industries, has placed higher demands on the response speed and environmental adaptability of on-load tap-changers, driving the industry toward more precise and durable solutions.
