Abstracts

DSL is a digital subscriber line, which is a combination of transmission technologies using a telephone line as a transmission medium. DSL technology supports symmetric and asymmetric transmission modes on subscriber loops that convey public telephone networks, solving the "last mile" transmission bottleneck that often occurs between network service providers and end users. Since the DSL access plan eliminates the need to reconstruct telephone lines, it can make full use of the telephone subscriber loops that can already be extensively deployed, greatly reducing the additional overhead. Therefore, the use of copper telephone lines to provide higher-speed Internet access is more popular among users and has attracted attention in various fields. It has been used in a large number of countries and regions.

Scope of the Report:

This report studies the DSL Network Equipment market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the DSL Network Equipment market by product type and applications/end industries.

The DSL network equipment market is expected to grow significantly over the following year owing to the increase in the number of internet users globally. Moreover, as the internet service providers are growing rapidly in terms of subscriptions, the demand for network equipment is anticipated to grow in the near future. The telecommunications, networks, and data center IT industries, DSL equipment sales tumbled in 2017, falling to $2.5 B as operators look to alternative deployments. DSL market experienced double-digit decline as Gfast looms over the horizon. Asia Pacific is expected to dominate the
