Abstracts

Digital signal processor (DSP) is a special purpose circuit that deciphers digital signals through mathematical calculations and provides a modified and refined output for users.

Scope of the Report:

This report focuses on the DSP in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The parameters which can be manipulated range from temperature, pressure to voice and audio. Digital signal processor process data in real time, have high data throughput, ensures repeatable, desired and accurate performance and is reprogrammable by software. It is increasingly being used across industry verticals such as communication, military, and aerospace and has various consumer and industrial applications. It can also be utilized for audio signal processing, speech processing, seismology, and radar applications among others. Increased usage of digital signal processing in consumer electronics and growth of these processors in wireless infrastructure sector are some of the factors driving the market growth. However, few limitations such as high consumption of power, reduced frequency range for operations, and need for analog to digital and digital to analog converters for these processors act as an impediment to the market growth. Europe, APAC regions will drive the digital signal processing market over the forecasted period.

The worldwide market for DSP is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according

to a new GIR (Global Info Research) study.
