## Abstracts

According to our (Global Info Research) latest study, the global Dual-Action Food Deoxidizer market size was valued at US\$ 37.45 million in 2025 and is forecast to a readjusted size of US\$ 50.17 million by 2032 with a CAGR of 4.3% during review period.

Dual-action food-grade oxygen absorbers are a type of preservative that combines oxygen absorption and moisture (or carbon dioxide) absorption functions. They efficiently remove oxygen and moisture (or carbon dioxide) from packaging, creating a dry, low-oxygen environment, thereby inhibiting oxidation, preventing mold growth, and extending the color, flavor, and nutritional value of food.

The upstream core raw materials include high-purity reduced iron powder, activated carbon, and sodium chloride, among other basic reactants. In addition, special packaging materials such as DuPont paper and PET/PE composite film are crucial supporting components, as their permeability directly determines the absorption rate.

In 2025, global sales are projected to be approximately 99,600 tons, with an average market price of approximately US\$385 per ton. The industry's gross profit margin is in the range of 10%?25%.
