The global Dual-Actuated Circulating Valve market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Dual-Actuated Circulating Valve is used to establish a circulation channel between the inside of the coiled tubing and the annulus. When the working tool string needs to be circulated from the middle of the pipe string, the circulation hole is opened to establish a circulation channel by means of ball pressurization. Large flow, then throw the ball and cut the pin to open the circulation valve for large-volume flushing.
