In Monoblock burners, the ventilator is integral to the burner's main body. Unlike Mono Block burners, Dual block burners consist of two separate units: a burner head unit and a ventilator system unit. A burner head unit and a ventilator system unit. The burner head unit consists of a burner body, gas nozzles, a swirler, a diffuser, a light oil train, an electrical panel, safety devices, and wiring. The ventilator system includes a fan, electromotor, and electrical panel. The ventilator system can install in the same room or a different area, and an Air-Duct connects the two units.
