## Abstracts

The global Dual Chamber Temporary Pacemaker market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A dual-chamber temporary pacemaker has two leads connected to the right atrium and right ventricle. Dual-chamber pacemakers have more comprehensive functions and are more in line with physiological requirements. It senses the electrical activity of the atria and ventricles to determine if they need to be paced. When pacing is required, the pacing pulses send 'instructions' to the atrium and ventricle in sequence, making the contraction and relaxation of the atrium and ventricle more coordinated, closer to the beating sequence of the normal heart. It is suitable for patients with sick sinus syndrome, atrioventricular block, paroxysmal atrial fibrillation, hypertrophic obstructive cardiomyopathy and vasovagal syncope (cardioinhibitory type).

This report studies the global Dual Chamber Temporary Pacemaker production, demand, key manufacturers, and key regions.
