The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Dual Circuit Controller a microprocessor for the calculation, control the core, with the corresponding software, in appearance and use similar to the conventional analogue controller digital control instrument, also known as single-loop digital controller. Single-loop controllers can generally accept multiple input signals, but only output an analogue signal, constituting a single-loop direct digital control. It consists of a microprocessor, process input and output channels, front panel, side panel, power supply, digital communication system and other hardware components and software components such as monitoring system and basic arithmetic programming system. It can be programmed by the user and consists of various regulation laws, so it is also called 'programmable controller'.
