## Abstracts

The global Dual Circuit Controller market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Dual Circuit Controller a microprocessor for the calculation, control the core, with the corresponding software, in appearance and use similar to the conventional analogue controller digital control instrument, also known as single-loop digital controller. Single-loop controllers can generally accept multiple input signals, but only output an analogue signal, constituting a single-loop direct digital control. It consists of a microprocessor, process input and output channels, front panel, side panel, power supply, digital communication system and other hardware components and software components such as monitoring system and basic arithmetic programming system. It can be programmed by the user and consists of various regulation laws, so it is also called 'programmable controller'.
