According to our (Global Info Research) latest study, the global Dual-coil Solenoid market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Dual-coil Solenoid means that there are two solenoid coils. The double coils should usually be electromagnetic directional valves. The single coil is always charged into the air and the double coil is energized instantaneously. The spool valve of the single-coil solenoid valve is spring-returned, and the solenoid valve automatically resets after the solenoid valve is de-energized. The double-coil solenoid valve needs the other side of the coil to be energized to change the position.
