## Abstracts

The global Dual-coil Solenoid market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Dual-coil Solenoid means that there are two solenoid coils. The double coils should usually be electromagnetic directional valves. The single coil is always charged into the air and the double coil is energized instantaneously. The spool valve of the single-coil solenoid valve is spring-returned, and the solenoid valve automatically resets after the solenoid valve is de-energized. The double-coil solenoid valve needs the other side of the coil to be energized to change the position.

This report studies the global Dual-coil Solenoid production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Dual-coil Solenoid, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
