Abstracts

A dual-color temperature spotlight is a type of lighting fixture that allows the user to adjust the color temperature of the light output. This typically involves the spotlight being able to switch between two different color temperatures, such as warm white (around 2700K-3500K) and cool white (around 5000K-6500K), providing flexibility in creating different lighting effects or adapting to different settings. These dual-color temperature spotlights are commonly used in various indoor and outdoor lighting applications, such as in homes, offices, retail spaces, and landscapes, where the ability to switch between different color temperatures can help create different ambiances or enhance the functionality of the lighting.
