According to our (Global Info Research) latest study, the global Dual Crystal Probe market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Dual Crystal Probe is a combination of two single probes, one for transmitting and one for receiving. The transmitted electrical pulse does not enter the receiving circuit, so it is not affected by blocking of the flaw detection instrument amplifier, and can detect near surface defects. Both the transmitting and receiving probes have their own delay blocks, and the incidence plane of the two delay blocks has a dip Angle, and the dip Angle depends on the depth of the detection area from the detection plane.
