The global Dual Cure UV Light Adhesive market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Dual cure UV light adhesive is a type of adhesive that is activated by both UV light and heat. It is designed to cure quickly and effectively, providing a strong bond between two surfaces. This type of adhesive is commonly used in a variety of industrial applications, including electronics, medical devices and aerospace. It is also used in the manufacture of optical and electronic components, where a clear bond is required. Dual cure UV light adhesive is typically applied using a dispensing device or syringe and can be cured in a matter of seconds using a UV light source. The heat cure component of the adhesive ensures complete curing and a strong bond over time.
