According to our (Global Info Research) latest study, the global Dual Frequency GPR Systems market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

In terms of region, North America is expected to hold the largest share of the global dual-band GPR systems market owing to the presence of major market players, infrastructure development activities, and adoption of advanced technologies. Europe and Asia Pacific are also expected to experience significant growth during the forecast period due to increasing investments in infrastructure development and expanding urbanization activities.

Dual Frequency GPR Systems are ground-penetrating radar systems that can operate at two different frequencies simultaneously or independently. These systems provide two different depths of penetration and resolutions for detecting subsurface features and structures. The lower frequency provides deeper penetration for larger objects or structures while the higher frequency provides higher resolution for smaller objects or structures closer to the surface.
