The global Dual Fuel Steam Boiler market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A dual fuel steam boiler is a boiler capable of heating with two different fuels. It can automatically switch to use different fuels for heating according to the fuel supply to maintain the best efficiency and economy. Typically, dual-fuel steam boilers can use two different types of fuel, such as natural gas and diesel, natural gas and coal, biomass and natural gas, and so on. The dual-fuel steam boiler has the advantages of flexibility and energy saving, and can flexibly choose the best heating method according to the fuel price and supply situation. At the same time, due to the use of two different fuels for heating, the reliability and safety of the boiler can be improved, and production interruptions due to fuel shortage or failure can be reduced.

This report studies the global Dual Fuel Steam Boiler production, demand, key manufacturers, and key regions.
