Abstracts

The global Dual Head Riveting Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The double-head riveting machine is also called the opposite riveting machine. It is a combination of two-head riveting machines. When working, the workpiece is riveted from both ends at the same time. The two heads of the riveting machine are arranged opposite to each other. The axis accuracy is relatively high, and the pressure, feed speed, and feed amount of the two heads of the riveting machine are required to be consistent, so the control system is more complicated than that of ordinary riveting machines.

This report studies the global Dual Head Riveting Machine production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Dual Head Riveting Machine, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
