## Abstracts

The global Dual Lumen Hemodialysis Catheter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Dual lumen hemodialysis catheter is a type of medical device that is used for hemodialysis, a medical procedure in which blood is filtered outside of the body to remove waste and excess fluids in patients with kidney failure. The catheter consists of two separate tubes or lumens that are inserted into a large vein, usually in the neck, chest, or groin area. One lumen is used to remove blood from the patient's body and transport it to the hemodialysis machine, while the other lumen is used to return the filtered blood back to the patient's body.
