Abstracts

The global Dual Pressure and Temperature Sensors market size is expected to reach \$ 1306.3 million by 2029, rising at a market growth of 24.3% CAGR during the forecast period (2023-2029).

The key manufacturers of Dual Pressure and Temperature Sensors in the world are Bosch, Sensata Technologies, TE Connectivity, Hella, Kulite, Shenzhen Ampron Technology, Gems Sensors, and Variohm, among which the top three manufacturers account for nearly 50%, with Bosch being the largest. The production of dual pressure and temperature sensors worldwide is mainly distributed in North America, Europe, China, and Japan, among which the top three production regions have a market share of nearly 90%, with Europe being the largest production region. In terms of product types, the growth rate of thread installation is relatively fast, and the market share is the highest, exceeding 80%, followed by embedded installation. In terms of its application, automobile are the largest application field, with a market share of nearly 75%, followed by industrial, oil and gas transportation, and the Internet of Things.

The temperature and pressure integrated sensor combines the dual layer characteristics of temperature sensors and pressure sensors. It has the advantage of measuring both temperature and pressure. Its structural design generally involves adding a temperature sensor probe below the pressure sensor, so its shape is different from that of a conventional pressure sensor and is also different from that of a regular temperature sensor. The dual pressure and temperature sensor are a dual output pressure and temperature sensor that monitors the pressure and temperature signals of oil and refrigerant. The product has good reliability and long service life, and is suitable for working in harsh environments.

This report studies the global Dual Pressure and Temperature Sensors production, demand, key manufacturers, and key regions.
