## Abstracts

According to our (Global Info Research) latest study, the global Dual Protocol SSD Enclosure market size was valued at US\$ 73.57 million in 2025 and is forecast to a readjusted size of US\$ 130 million by 2032 with a CAGR of 8.5% during review period.

In 2025, global Dual Protocol SSD Enclosure production reached approximately 3.58 million units, with an average global market price of around US\$20 per unit.

A dual protocol SSD enclosure is an external storage enclosure designed to support both NVMe (PCIe) and SATA SSDs within a single device. Equipped with an intelligent bridge controller, it automatically detects the inserted SSD protocol and enables plug-and-play operation. Typically featuring a USB-C interface (such as USB 3.2 or Thunderbolt-compatible solutions), dual protocol SSD enclosures combine high data throughput with broad compatibility, making them suitable for data expansion, backup, content creation, and cross-platform portable storage applications.

Upstream of dual protocol SSD enclosures consists primarily of bridge controller chips, electronic components, and structural materials, with the core elements being USB-to-PCIe/SATA bridge controllers, PCBs, connectors, metal or engineering-plastic housings, and thermal management materials. Representative chip and solution providers include ASMedia, Realtek, and JMicron, while structural components rely on aluminum alloys, thermal pads, and injection-molded plastics. Midstream players are storage peripheral brands and OEM/ODM manufacturers responsible for industrial design, firmware tuning, assembly, and quality control. Downstream demand comes from consumer and professional markets such as PC and laptop users, photographers and video creators, IT professionals, and light enterprise data backup use cases, with

ecosystem participation from companies like Samsung, Western Digital, Seagate, and SanDisk and their end-user bases.

The annual production capacity of a single-line Dual Protocol SSD Enclosure is approximately 50k units, with a gross profit margin of approximately 25%-45%.

The dual protocol SSD enclosure market is transitioning from single-interface peripherals toward highly compatible portable storage solutions. As NVMe and SATA SSDs continue to coexist in the installed base, user demand for one-enclosure-fits-all compatibility has grown, positioning dual protocol designs as an important sub-segment of external storage accessories. Market trends include migration toward higher-bandwidth interfaces, more stable controller firmware, improved thermal management, and tool-free user-friendly designs, alongside increasing emphasis on industrial design and portability. Growth is driven by expanding PC and laptop storage needs, higher frequency of data mobility among content creators, rising value of reusing legacy SSDs, and the proliferation of multi-device and multi-OS usage scenarios. Headwinds include rapid interface standard evolution shortening product lifecycles, price competition stemming from controller solution homogenization, cyclical consumer electronics demand, and higher performance scenarios imposing stricter requirements on stability and thermal design, compelling manufacturers to balance cost efficiency with performance reliability.
