Abstracts

The global Dual-Screen Automotive Cockpit market size is expected to reach \$ 5806 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

A dual-screen automotive cockpit is an integrated in-vehicle display system, typically composed of a driver information display screen (instrument panel) and a central infotainment/information display screen, widely used in mid-to-high-end models and intelligent new energy vehicles. This system integrates multiple screens to achieve centralized information display, touch interaction, intelligent in-vehicle entertainment, and driver assistance functions, significantly enhancing the cockpit's technological feel and user experience.

Upstream suppliers primarily include display panel suppliers (LCD, OLED, AMOLED), touch modules, backlights, driver ICs, processing chips, flexible printed circuit boards (FPC), connectors, and suppliers of plastic and metal materials for the housing, providing core hardware and structural support for the dual-screen system. Midstream suppliers are dual-screen module and intelligent cockpit system integrators, who integrate the instrument panel and central infotainment screens, completing the development and debugging of touch controls, UI customization, screen linkage, and multi-functional interactive systems. Downstream suppliers are mainly OEMs and intelligent vehicle system integrators, embedding dual-screen systems into passenger cars, new energy vehicles, and high-end intelligent models to achieve driver information display, navigation, multimedia, vehicle networking, and driver assistance functions.

In 2025, global sales of dual-screen displays for automotive cockpits will reach 11.5 million units, with a production capacity of approximately 16.5 million units. The average

selling price is \$320 per unit, and the average gross profit margin is 20%-35%.

Dual-screen displays in automotive cockpits are a core component of smart cockpits, with the global supply chain primarily consisting of display panel manufacturers, automotive display module manufacturers, and smart cockpit system integrators. Japanese, Korean, and European companies hold leading positions in the high-end automotive display sector. Chinese manufacturers have risen rapidly in recent years thanks to the new energy vehicle market. The global digital cockpit market is maintaining rapid growth, with the Asia-Pacific region holding the largest market share.

Demand for dual-screen displays in automotive cockpits mainly comes from the new energy vehicle, smart car, and high-end passenger vehicle markets. As consumers increasingly demand intelligent interaction, vehicle connectivity, OTA upgrades, and immersive cockpit experiences, dual-screen displays are gradually penetrating from luxury models to mid-range models. New energy vehicle manufacturers and emerging brands generally adopt dual-screen displays as a standard feature for intelligent systems to enhance their technological appeal and brand differentiation. Furthermore, the development of ADAS (Advanced Driver Assistance Systems), HUD (Head-Up Display), and AI voice interaction has also driven the growth in demand for larger sizes, higher resolutions, and multi-screen??(multi-screen linkage). Currently, 10-15 inch displays remain the mainstream configuration, while large-size dual-screen and multi-screen solutions are experiencing the fastest growth.

The dual-screen technology landscape is evolving from traditional TFT-LCD to OLED, Mini-LED, and flexible curved screens. Early products primarily featured separate LCD solutions for the instrument panel and center console screen, but this is gradually evolving towards integrated screens, curved screens, and ultra-wide screens. OLED technology, due to its high contrast, thinness, and flexibility, is rapidly gaining penetration in high-end vehicles, while Mini-LED is expanding in the mid-to-high-end market thanks to its high brightness and cost advantages. Future technological priorities include multi-screen interaction, AI adaptive UI, dual-view display, privacy display, and in-vehicle health monitoring. New products supporting independent dual-screen displays and flexible OLED cockpit solutions have already emerged in the industry.
