According to our (Global Info Research) latest study, the global Dual Sided Flying Probe Testers market size was valued at US\$ 147 million in 2024 and is forecast to a readjusted size of USD 213 million by 2031 with a CAGR of 5.5% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Dual-Sided Flying Probe Testers are automated electronic testing machines designed to inspect printed circuit boards (PCBs) by using multiple moving probes that can access both sides of the board simultaneously. Unlike traditional testing methods that require custom fixtures, dual-sided flying probe testers use “flying” probes that move freely to make contact with designated test points on the PCB. This approach allows for flexible, fixtureless testing that can handle complex PCB designs with high component density.
