According to our (Global Info Research) latest study, the global Dual Voltage Comparator market size was valued at USD 150.2 million in 2023 and is forecast to a readjusted size of USD 261.3 million by 2030 with a CAGR of 8.2% during review period.

A dual voltage comparator is a type of comparator. It features: output load resistance can join in allowing any supply voltage, supply voltage range is not limited by voltage of the V_{cc} value. The output can be used as a simple of SPS open circuit (when no load resistance is not used), sink current outputs are likely to get a driver and the device is limited by beta. When the limiting current 16 (ma), the output transistor will exit and the output voltage will rise soon. Output saturation voltage is output transistor is about 60 ohm gamma SAT limit. When the load current is small, the output transistor's low offset voltage (about 1.0mV) allows the output clamp to be at the zero level.
