Abstracts

The global Dual Wheel Casters market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The dual-wheel casters have a differential effect, so maneuverability is excellent. This means: Since the two wheels can also swivel in opposite directions, tandem castors can be moved more easily and have advantages over single furniture castors, making them ideal for a variety of medium to heavy lifting jobs. The double-wheel castors have a bracket made of high-quality materials such as plastic or steel, so they are very strong and at the same time do not damage the ground during use. The double-wheel castors with soft tread are especially suitable for sensitive floors such as tiles, parquet or laminate. Harder treads are better for soft ground conditions such as carpet. The double wheel castors are also available in conductive, washable and stainless steel versions for areas where hygiene regulations recommend regular cleaning and disinfection.
