According to our (Global Info Research) latest study, the global Duck Vaccines market size was valued at USD 385.9 million in 2023 and is forecast to a readjusted size of USD 556.1 million by 2030 with a CAGR of 5.4% during review period.

Vaccination is commonly used in commercial duck and increasingly in backyard birds to control disease.

The duck vaccines market is witnessing steady growth due to the increasing demand for duck meat and the rising prevalence of avian diseases in duck populations. Duck vaccines play a vital role in preventing and controlling viral and bacterial diseases in ducks. The market is driven by factors such as the growth of the duck farming industry, rising consumer preference for duck products, and the need for effective disease management strategies. Advancements in vaccine development and technology, such as the availability of recombinant vaccines and improved vaccination techniques, are further fueling market growth. However, challenges such as the limited availability of specific duck vaccines for certain diseases and the high costs associated with vaccine procurement and administration may hinder market expansion. With the continuous focus on improving duck health, biosecurity measures, and sustainable duck farming practices, the duck vaccines market is expected to witness sustained growth in the coming years.
