According to our (Global Info Research) latest study, the global Duckbill Valves market size was valued at USD 116.3 million in 2023 and is forecast to a readjusted size of USD 144.7 million by 2030 with a CAGR of 3.2% during review period.

Duckbill valves are unique, one-piece, elastomeric components that act as backflow prevention devices or one-way valves or check valves. They have elastomeric lips in the shape of a duckbill which prevent backflow and allow forward flow. The main advantage of duckbill valves over other types of one-way valves is that duckbill valves are self-contained i.e., the critical sealing function is an integral part of the one piece elastomeric component as opposed to valves where a sealing element has to engage with a smooth seat surface to form a seal. Therefore, duckbill valves are easily incorporated and assembled into a wide variety of devices without the hassle or problems associated with the surface finish quality of mating seats and/or complex assembly processes.

Global key players of duckbill valves include Red Valve, EVR Products, Cla-Val, Crane Building Services & Utilities (Viking Johnson), etc. Global top four manufacturers hold a share over 40%.
