Ducted burner solutions refer to complete combustion and heating equipment and engineering services provided for systems such as air ducts, waste heat boilers (HRSG), and industrial heating ducts. These include the burner body, fuel control system, ignition system, air distribution structure, emission control technology, and associated installation, commissioning, optimization, and maintenance. This solution primarily addresses issues such as insufficient steam production, unstable waste heat from gas turbines, low industrial heating efficiency, excessive emissions, uneven combustion, and poor system reliability. It achieves higher steam production, lower emissions, and more stable process temperatures through efficient afterburner combustion.
