The global Duct Smoke Detectors market size is expected to reach \$ 122.2 million by 2029, rising at a market growth of 1.9% CAGR during the forecast period (2023-2029).

Global key players of Duct Smoke Detectors include Honeywell, Carrier Global Corporation, Halma, etc. The top three players hold a share over 48%.

Asia-Pacific is the largest market, has a share about 33%, followed by North America and Europe, with share 32% and 28%, separately.

In terms of product type, Photoelectric Dust Smoke Detectors is the largest segment, occupied for a share of 92%, and in terms of application, Commercial has a share about 52%.

A duct smoke detector can be defined as a device that detects if there is any smoke present in the air ducts in the network of ducts of the HVAC systems used in commercial buildings. The Heating, Ventilation, Air Conditioning in commercial buildings is done via these ducts, hence it is important to make sure that these ducts remain functioning, and are not the cause of any sort of damage to the building. If there is any sort of fire in the building that is undetected, the smoke will enter the cluster of ducts where it can be detected via the Duct Smoke Detector.

Building, fire and life safety codes often require the installation of duct smoke detection in heating, ventilating, and air conditioning (HVAC) ducts for the detection of fires in an HVAC System.

Duct smoke detectors provide early detection of smoke and products of combustion

present in air moving through HVAC ducts. These devices are designed for prevention of smoke recirculation in areas by the air handling systems. Fans, blowers and complete systems may be shut down in the event of smoke detection.
