A ductile iron drain separator is a specialized piece of equipment used in drainage systems to separate and remove debris and sediment from wastewater before it enters the sewer system. The separator is made of ductile iron, a type of iron that is more flexible and durable than traditional cast iron. It is designed to capture, retain, and remove solid particles and pollutants from the water flow, preventing clogs and protecting the environment from harmful contaminants. Drain separators are commonly used in industrial and commercial settings where large volumes of water need to be treated before disposal.
