## Abstracts

The global Ductile Iron Grating market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Ductile iron grating refers to a type of grating made from ductile iron, which is a form of cast iron that has been treated to improve its strength and ductility. Ductile iron is created by adding small amounts of magnesium to molten iron, which changes the graphite structure from flakes to nodules. This modification gives ductile iron superior mechanical properties compared to traditional cast iron.

This report studies the global Ductile Iron Grating production, demand, key manufacturers, and key regions.
