Ductless Heat Recovery Ventilator (HRV) is a type of ventilation system that improves indoor air quality and energy efficiency by exchanging stale indoor air with fresh outdoor air while transferring heat between the two air streams. Unlike traditional ventilation systems, ductless HRVs do not require ductwork, making them suitable for buildings where installing ducts is impractical or too expensive.

Ductless HRVs are commonly used in homes, apartments, offices, and other buildings where maintaining good air quality and energy efficiency is important, and where traditional ductwork is either not present or not practical to install.
