According to our (Global Info Research) latest study, the global Ductless Heating and Cooling market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Ductless heating and cooling, also known as ductless mini-split systems, are HVAC systems that provide both heating and cooling without the need for traditional ductwork. Instead, they consist of an outdoor unit and one or more indoor air handlers, connected by refrigerant lines and electrical wiring.

Ductless systems allow for zoned heating and cooling, meaning you can independently control the temperature in different areas or rooms. Each indoor unit can be set to a specific temperature, providing personalized comfort and energy savings. Ductless systems use inverter technology, which allows the compressor to adjust its speed based on the heating or cooling demands. This results in energy savings as the system operates at lower power consumption when less heating or cooling is needed. Ductless systems are suitable for various applications since they do not require ductwork. This makes them ideal for retrofitting older buildings, room additions, or spaces where traditional ductwork is not feasible. Additionally, ductless systems come in various sizes and can cater to different heating and cooling needs.
