According to our (Global Info Research) latest study, the global Ductless Recirculating Fume Hood market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The Ductless Recirculating Fume Hood is a self-contained compact workstation that provides continuous air flow, filters out harmful fumes, and recirculates clean air back into your work environment. Because the air is recirculated, there is no need for external ducting or make-up air. These air filtration systems are designed to keep harmful airborne contaminants out of the breathing zone of operators while working inside a fume hood.

These containment systems are used in a variety of applications including chemical fume control, powder and dust removal, solvent vapor control, powder filling, light grinding, acid gas fume, anesthetic gas containment, epoxy fume control and other applications that generate hazardous particulates and fumes .
