Duodenoscopes are flexible, lighted tubes that are threaded through the mouth, throat, and stomach into the top of the small intestine (duodenum). They are used during endoscopic retrograde cholangiopancreatography (ERCP), a potentially life-saving procedure to diagnose and treat problems in the pancreas and bile ducts. In the United States, duodenoscopes are used in more than 500,000 ERCP procedures each year.

Duodenoscopes are complex instruments that contain many small working parts. If not

thoroughly cleaned and disinfected, tissue or fluid from one patient can remain in a duodenoscope when it is used on a subsequent patient. In rare cases, this can lead to patient-to-patient infection.

Market competition is not intense. Olympus is the leader of this industry. Olympus controls 85% of the US market for duodenoscope. With the development of society and the changing of consumer demand, the Duodenoscope industry will be more and more popular in the future.

The worldwide market for Duodenoscopes is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
