According to our (Global Info Research) latest study, the global Duplex and Super Duplex Stainless Steel market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Duplex and super duplex stainless steels are different types of stainless steel with different organizational structures and performance characteristics. The duplex stainless steel is a stainless steel with a dual-phase structure, usually composed of austenite and ferrite. It has good corrosion resistance, high strength and good plasticity. The super duplex stainless steel is a stainless steel prepared through microalloying technology and has high strength and corrosion resistance. Its duplex structure is more uniform than duplex stainless steel and has better weldability and plasticity.

During the manufacturing process of duplex and super duplex stainless steels, its organizational structure and performance characteristics can be changed by adjusting the chemical composition and heat treatment process to meet the needs of different fields. Choosing the right stainless steel material needs to be considered based on specific use situations and requirements, such as corrosion resistance, strength and workability.
