Abstracts

The global Duplex and Super Duplex Stainless Steel market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

During the manufacturing process of duplex and super duplex stainless steels, its organizational structure and performance characteristics can be changed by adjusting the chemical composition and heat treatment process to meet the needs of different fields. Choosing the right stainless steel material needs to be considered based on specific use situations and requirements, such as corrosion resistance, strength and workability.

Duplex and super duplex stainless steels are different types of stainless steel with different organizational structures and performance characteristics. The duplex stainless steel is a stainless steel with a dual-phase structure, usually composed of austenite and ferrite. It has good corrosion resistance, high strength and good plasticity. The super duplex stainless steel is a stainless steel prepared through microalloying technology and has high strength and corrosion resistance. Its duplex structure is more uniform than duplex stainless steel and has better weldability and plasticity.

This report studies the global Duplex and Super Duplex Stainless Steel production, demand, key manufacturers, and key regions.
