Abstracts

The dura mater is a tough membrane covering the surface of the brain tissue, which plays a role in protecting and supporting the brain tissue. During neurosurgery or intracranial trauma, the dura mater may need to be incised to allow for surgical procedures, and a dural repair product may be used to close the incision and restore the integrity of the meninges. To avoid cerebrospinal fluid leakage, infection, and other complications, specific products are needed to repair and close the meninges.
