## Abstracts

According to our (Global Info Research) latest study, the global Dust Collecting System market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Dust collecting system is industrial dust collection equipment for collecting and absorbing waste media particles, dust fumes, oily water, etc. generated during production, operation, and transportation for industrial purposes. The multi-phase mixture involved in industrial dust removal is called gas-phase suspension or aerosol. The fine particles dispersed in it are called dust particles or fine particles, and the accumulation state of the dust particles is called powder. In order to correctly design and select dust removal equipment in engineering design, the main physical and chemical properties of dust must be mastered. The parameters used to describe the dust properties are: particle size and dispersion, density and bulk density, cohesion, wetting, load Electricity and conductivity, natural accumulation angle, explosive.
