Abstracts

The global Dust, Fume and Mist Collector market size is expected to reach \$ 5395.5 million by 2029, rising at a market growth of 3.9% CAGR during the forecast period (2023-2029).

The key global manufacturers of dust, fume and oil mist collectors are Longking, ANDRITZ, Babcock & Wilcox, Feida, FLSmidth, KC Cottrell, Wood Group (Foster Wheeler), Sinosteel Tiancheng and others. The top five manufacturers occupy more than 30% of the market share, of which the largest producer is Longking, occupying more than 10% of the market share. The global origin is mainly distributed in North America, Europe, China, Japan, Korea, Australia, etc. In terms of its product categories, dust collectors hold the major market share with more than 80%, while fume and oil mist collectors account for a smaller share. In terms of its applications, industry is its top application area, accounting for more than 60%. In addition, there are also some applications in the food and beverage industry and pharmaceutical industry.

A dust collector is a system used to enhance the quality of air released from industrial and commercial processes by collecting dust and other impurities from air or gas. Designed to handle high-volume dust loads, a dust collector system consists of a blower, dust filter, a filter-cleaning system, and a dust receptacle or dust removal system. It is distinguished from air cleaners, which use disposable filters to remove dust.

Fume and Mist collectors filter mist from the air generated by coolants and oils used during wet machining and metalworking processes. Uncollected coolant and machining oil mist can cause slippery floors and collect on machines, walls and ceilings, creating an unpleasant, high-maintenance working environment.

This report mainly focuses on the new Dust, Fume and Mist Collector equipment, instead of service, rental, etc.

The Dust, Fume and Mist Collector industry can be broken down into several segments, Dust Collector, Fume and Mist Collector.
